

Telstra InfraCo Digital Infrastructure APIs

Unlock the power of our digital infrastructure

Automate. Innovate. Grow.

The future is built on connectivity. Your customers and end users now expect seamless, on-demand digital experiences.

Telstra InfraCo is transforming how you build digital infrastructure, moving from static, manual processes to a dynamic, automated, and programmable ecosystem. Our APIs are designed to be your direct connection to this future, enabling you to build, manage, and scale services with greater speed and control.

What our APIs offer your business

Telstra InfraCo APIs offer direct integration to our infrastructure solutions, helping you transform your operations and create exceptional customer experiences.

More control over your services

Take the driver's seat. Our APIs provide the tools to self-manage your services, allowing you to choose, activate, manage, and monitor your network on your terms and timeline.

More efficiency through automation

Move faster and reduce manual overhead. By integrating our APIs into your systems, you can automate critical processes from quoting and ordering to service management, freeing your teams to focus on innovation and growth.

More transparency for better CX

Gain a real-time view of your services. With direct access to outage information, order status, and diagnostics, you can proactively manage your network, making it possible to deliver a more reliable experience to your end users.

Your foundation for the next wave of innovation

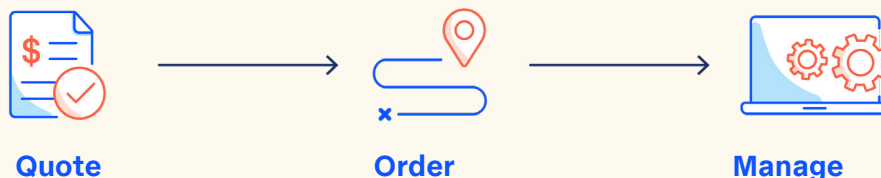

Our Connected Future 30 strategy sets out how we intend to push the boundaries of our network leadership and enable new opportunities through Network-as-a-Product (NaaP).

APIs are the building blocks for our NaaP offerings, and will help you take advantage of the growing sophistication of our network. Building to our APIs now will help you get to market faster with differentiated services built on your choice of our network attributes.

Automate your end-to-end journey

Go from quote to management, seamlessly.

Our API roadmap is designed to support your entire customer lifecycle. We provide a suite of APIs to simplify how you engage with us, making it easier for you to improve your business operations and accelerate your sales process.

	Quote	Order	Manage
Key benefits	• Get service availability and pricing. • Enable bulk quoting for large opportunities • Access real-time pricing for select products.	• Receive transparent, up-to-date order status. • Track and monitor service delivery in real-time with push or pull notifications.	• Monitor and manage your services. • Get real-time outage information. • Simplify support with integrated ticket creation.
